

PRANJAL PHANSE

Data Analyst & Business Intelligence Specialist | Dashboards, Automation & AI-Driven Reporting

Mumbai, India (remote) • +91-9892817829 • pranjalphanse@gmail.com • [LinkedIn](#) • [GitHub](#)

PROFESSIONAL SUMMARY

Data Analyst and Business Intelligence Specialist with 6+ years building dashboards, scalable reporting systems, and cloud-based automation that reduce manual work across business functions. Strong SQL and Python, advanced Microsoft Excel and Google Sheets, and hands-on dashboard development in Power BI, Tableau, Looker, and Metabase. Builds REST API integrations connecting business platforms and designs automated workflows that replace recurring manual reporting. Uses AI tools including Claude and ChatGPT daily to accelerate SQL development, analysis, and documentation, with human validation of every output. Detail-oriented and self-directed — validates reporting accuracy across business units, maintains data integrity across multiple platforms, documents technical workflows, and continuously identifies bottlenecks and process improvement opportunities without waiting to be asked.

TECHNICAL SKILLS

BI & Dashboards: Power BI, Looker, Tableau (design through TWB/XML-level development), Metabase, AWS QuickSight — operational and executive dashboards, visualisation design, self-serve reporting

SQL & Databases: Advanced SQL — 6+ years (window functions, CTEs, complex joins, aggregations, query optimisation); PostgreSQL, Trino/Presto, AWS Athena, Redshift, BigQuery, MySQL; data extraction, transformation, and validation

Python & Automation: Python (pandas, NumPy, SciPy, Scikit-Learn), Jupyter — data processing, reporting automation, workflow scripting, scheduled pipeline development

Spreadsheets: Advanced Microsoft Excel (PivotTables, complex formulas, lookups, reconciliation and modelling workbooks), Google Sheets (advanced formulas, service-account API automation), Microsoft 365

APIs & Cloud Workflows: REST API integrations (Slack Web API, Google Sheets API, internal service APIs), cloud-based data workflows on AWS (S3, Athena, Glue, SSM), Apache Airflow, Rundeck job scheduling, ETL/ELT design, Git version control

AI Tools: Claude, ChatGPT, and other LLM platforms — applied daily to accelerate SQL development and debugging, structure analytical approaches, automate repetitive reporting, and generate documentation; all output independently validated before use

Analytics & Measurement: Google Analytics (GA4), KPI development and performance measurement, trend and bottleneck identification, funnel and cohort analysis, forecasting, A/B testing, data integrity and reconciliation

PROFESSIONAL EXPERIENCE

Upstox (RKSV Securities) | Senior Data Analyst – Business Intelligence & Automation

March 2020 – Present

Mumbai, India

- **Dashboard Development & Maintenance:** Build, maintain, and continuously improve business dashboards in Tableau, Power BI, and AWS QuickSight delivering actionable operational insights — including intraday hour-by-hour performance tracking with day-over-day and week-over-week comparisons that enabled same-day decisions rather than next-day reporting.
- **Executive Reporting Initiatives:** Support recurring executive reporting with visual dashboards and written narrative summaries — a key-signals scorecard, per-segment commentary, and takeaway analysis — so leadership received interpretation rather than raw figures requiring decoding.
- **Cloud-Based Workflows & Automation:** Develop cloud-based automated workflows on AWS orchestrated via Airflow and Rundeck, replacing manual reporting cycles with scheduled pipelines — reducing recurring manual effort by 25% and eliminating a persistent class of manual data-entry error.
- **REST API Integrations:** Build and troubleshoot REST API integrations connecting business platforms — automated report delivery to Google Sheets via service-account API and to Slack channels via the Slack Web API, plus internal service integrations for secure data retrieval.
- **AI Tools for Reporting Efficiency:** Use Claude and ChatGPT daily to improve reporting efficiency — accelerating SQL development and debugging, structuring analytical approaches, automating repetitive reporting tasks, and generating documentation — while reading and validating every output rather than accepting it unchecked.
- **SQL Development, Extraction & Validation:** Write and optimise complex SQL for extraction, transformation, and validation across very large datasets; build clean, scalable data models supporting downstream reporting and self-serve access for business teams.

- **Reporting Accuracy Across Business Units:** Validate reporting accuracy across multiple business functions through systematic reconciliation against source systems, completeness and threshold checks, and anomaly detection — maintaining data integrity across platforms so figures reaching decision-makers are trusted.
- **Trend, Bottleneck & Opportunity Identification:** Analyse operational, sales, and revenue data to identify trends, bottlenecks, and improvement opportunities; funnel diagnostics and root-cause analysis surfaced an operational gap that, once addressed, delivered a 15% improvement in customer activation.
- **KPI Development & Performance Measurement:** Define, align, and track KPIs across teams so business functions measure performance consistently; partner with leadership on new reporting initiatives and translate business needs into reporting requirements.
- **Documentation & Continuous Improvement:** Document reporting processes, technical workflows, validation thresholds, and edge cases so systems can be operated by others; continuously optimise reporting for speed and accuracy and proactively recommend improvements to dashboards and data systems.

Aditech Softwares Pvt Ltd | Machine Learning Intern – Data Analytics & Automation
July 2019 – September 2019

Mumbai, India

- **Applied SQL and Python (pandas, NumPy, SciPy)** to data extraction, cleaning, transformation, and validation across large datasets; built and evaluated predictive models.
- **Automated recurring reporting workflows in Python** (~30% manual effort reduction) and documented process steps for repeatable execution by others.

GM Consultancy Services | Software Developer
January 2018 – January 2019

Mumbai, India

- **Built data handling and integration solutions from business requirements;** developed understanding of API-based system integration and cross-functional delivery in a client-facing environment.

EDUCATION

Master of Computer Applications (MCA) University of Mumbai, Maharashtra, India	2015 – 2018
BSc Information Technology University of Mumbai, Maharashtra, India	2012 – 2015

CERTIFICATIONS

- Advanced Google Analytics (GA4) — Measurement, Reporting & Attribution
- Data Science Master Program — Statistics, Analytics & Predictive Modelling
- Introduction to AI and Machine Learning on Google Cloud

KEY COMPETENCIES

Power BI • Looker • Tableau • SQL • Python • Advanced Excel • Google Sheets • GA4 • Claude AI • ChatGPT • REST APIs
 • Microsoft 365 • Cloud Data Workflows • Workflow Automation • Data Extraction, Transformation & Validation • Data Integrity • KPI Development • Executive Reporting • Bottleneck Identification • Process Documentation • Continuous Improvement
